

NAME

version – function

LIBRARY

Codata library (*libcodata*, *-lcodata*)

SYNOPSIS

Fortran **function version()***result(fptr)*
 character(len=:), pointer :: fptr

C **char* ciaaw_version()**

Python **str: pyciaaw.__version__**

DESCRIPTION

Get the library version.

RETURN VALUE

pointer Pointer to the version string.

EXAMPLE

Fortran:
 use codata
 print *, "version = ", version()

C:
 include <stdio.h>
 include "codata.h"
 printf("version = %s\n", codata_version());

Python:
 import pycodata
 print(f"version = {pycodata.__version__}")
