

**NAME**

version – function

**LIBRARY**

Codata library (*libcodata*, *-lcodata*)

**SYNOPSIS**

Fortran     **function version()result( *fptr* )**  
              **character(len=:), pointer :: *fptr***

C           **char\* codata\_version()**

Python     **str:codata.\_\_version\_\_**

**DESCRIPTION**

Get the library version.

**RETURN VALUE**

pointer     Pointer to the version string.

**EXAMPLE**

Fortran:

```
use codata
print *, "version = ", version()
```

C:

```
include <stdio.h>
include "codata.h"
printf("version = %s\n", codata_version());
```

Python:

```
import pycodata
print(f"version = {pycodata.__version__}")
```
