NAME

codata − get the fundamental physical constants

SYNOPSIS

codata [*OPTION*]...

DESCRIPTION

codata is a command line interface which prints all the CODATA constants.

The current values are from 2022. Older values can be retrieved if needed and the output can be filtered with *REGEX PATTERNS*.

OPTIONS

−y, −−year *YEAR*
: CODATA constants: 2022, 2018, 2014, 2010

−p, **−−pattern** *PATTERN*
: Regex pattern for filtering the constants. Multiple patterns can be passed by repeating this option.

−a, −−value
: Show only the value.

−e, −−error
: Show only the uncertainty.

−u, −−usage
: Show usage text and exit.

−v,−−version
: Show version information and exit.

−h, −−help
: Show help text and exit.

EXAMPLE

Minimal example

```
codata
codata -p Faraday
codata -y 2014 -p molar.*gas,electron.*eV
codata [B,b]oltzmann.*eV
```
