

NAME

version – function

LIBRARY

Codata library (*libcodata*, *-lcodata*)

SYNOPSIS

Fortran **function version()result(*fptr*)**
 character(len=:), pointer :: *fptr*

C **char* codata_version()**

Python **str:codata.__version__**

DESCRIPTION

Get the library version.

RETURN VALUE

pointer Pointer to the version string.

EXAMPLE

Fortran:

```
use codata
print *, "version = ", version()
```

C:

```
include <stdio.h>
include "codata.h"
printf("version = %s\n", codata_version());
```

Python:

```
import pycodata
print(f"version = {pycodata.__version__}")
```
