

**NAME**

version – function

**LIBRARY**

Codata library (*libcodata*, *-lcodata*)

**SYNOPSIS**

Fortran     **function version()result( *fptr* )**  
             **character(len=:), pointer :: *fptr***

C           **char\* ciaaw\_version()**

Python     **str: pyciaaw.\_\_version\_\_**

**DESCRIPTION**

Get the library version.

**RETURN VALUE**

pointer     Pointer to the version string.

**EXAMPLE**

Fortran:  
    use codata  
    print \*, "version = ", version()

C:  
    include <stdio.h>  
    include "codata.h"  
    printf("version = %s\n", codata\_version());

Python:  
    import pycodata  
    print(f"version = {pycodata.\_\_version\_\_}")
